This paper was featured in the Sunday New York Times Magazine, "A question of resilience", 7 May, 2006.

This paper is a Thompson's ISI "Super Hot Paper" as at December 2005. A super hot paper is a paper that has consistently ranked in the top 100 papers in citations, across all branches of science, in every month for 2 years since Dec. 2003. Among the papers on ISI's super hot papers list, this paper ranks 13th across all fields of science. It ranks first among the six super hot papers from the neuroscience category. There are no super hot papers from the psychology/psychiatry category.

This paper's finding was named the runner-up for most important scientific finding published in Science in 2003.

This paper was named a "Fast-Breaking Paper" as the most cited paper in the field of Neuroscience & Behavior from July 2003 by Essential Science Indicators, http://esi_topics.com/.

This paper was reviewed in Faculty1000 of Medicine and Faculty1000 of Biology, scored "9 exceptional".

This paper is disseminated as a PharmD training program for psychiatrists: slide kit, guidebook, and accompanying CD-ROM: "Causes & Consequences of Depression: Rationale for Early, Vigorous, & Complete Treatment to Prevent Remission, 2005."

Art:

"Nature's Great Experiment," <http://www.naturesgreatexperiment.com>

This is an installation of three videos inspired by our Environmental Risk Longitudinal Twin Study (E-risk) in collaboration with artist Jordan Baseman. The show opened at the Monash University Museum of Art and Design to an audience of over 900 in February, 2007, and shows at the Newcastle Policy Ethics & Life Sciences Center were viewed by more than 700 people in March-April 2007; and 50 viewers attended the invitation-only show at the Wellcome Trust Museum of Medicine in London in May, 2007. "Laws of Variation" films a very bloody multiple-birth delivery, with voiceover of Terrie Moffitt discussing the joys and traumas of human variation. "Tape1 Tape2" presents a mother of MZ twins explaining to one of our research workers the reasons why she adores one daughter and dislikes the other. "Nature's great experiment" narrates a research workers' view of the science of behavioural genetics, and describes her day-to-day experiences with families, some of whom harm or neglect their twins. The art was funded by the Wellcome Trust. The website has been visited by more than 30,000 viewers each year since 2007. In 2010 the films are screened in lecture theatres and galleries in Belfast, Dundee, Aberdeen, Hull, and Bury St. Edmunds, as part of the Wellcome Trust "identity" series.
